Example](#)

Dear Customer,

Integrated Control Solutions (ICS) was founded in 1990 to serve the Japanese factory automation spare parts business. We import directly from Japan and treat each of our customers with the same personal consideration.

Companies](#)

Announcing Marco Sanzetenea

We are very pleased and proud to welcome the opening of our sales office in Bolivia, which will take care of all South American requests.

Please contact Marco Sanzetenea via email:
icsmarco@comcast.net

We feel that this is a great opportunity to support those Japanese transplant companies in South America as well as those companies that have purchased and are using Japanese machinery.

We hope you share our excitement about this opportunity and will inform any contacts that you may have dealing in South America.

USA - icsrequest@comcast.net

Mexico - icsvictor@comcast.net

Central/South America - icsmarco@comcast.net

ICS provee refacciones para productos de origen Japoneses (componentes eléctricos, electrónicos, mecánicos y herramientas) para maquinaria y equipos de control y proceso a la Industria en México, Centro y Sudamérica.

Nuestra filosofía es proveer productos de calidad, tiempos cortos de entrega y precios competitivos a nuestros clientes.

Le invitamos a que navegue por nuestra **página de Internet**, para que conozca algunos de los

productos que manejamos con mas frecuencia y si tiene una necesidad envíenos su solicitud de cotización incluyendo los siguientes datos: cantidad, No. de parte, fabricante, y la descripción del producto con los detalles que nos pudiera ayudar a servirle mejor (Ej. Volts, amperes, colores, caballos de fuerza, etc.).

Visiting Suppliers in Japan

We will be visiting Tokyo and Osaka in late March. We will be discussing our import business and how we can do better for our customers.

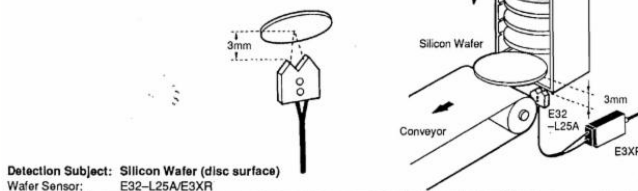

Do you have any products you find difficult to source? **Send us an email** and we can try to locate them.

A Super Metering pump on the bench for training.

Application Example

1 Wafer Detection for Wafer Transport Device

Can detect with accuracy without being affected by the color and roughness on the wafer surface. Detects silicon, gallium-arsenic, and other wafer materials. Ideal for ceramic and glass boards.
